Reasons For Allowance

The prior art of record does not disclose or fairly suggest a laser treatment apparatus comprising a laser light source with optics and optical fiber including optics to vary the end face image of the fiber using magnification to change the spot size of the treatment beam, a condensing lens and an element having a lower transmittance in its center portion than in a peripheral portion, the element positioned on the optical axis to receive the beam from the exit face of the optical fiber. U.S. Patent 4,838,266 to Koziol et al. teaches using optical elements with variable transmittance to alter the energy distribution of a light beam and U.S. Patent 4,729,372 to L'Esperance, Jr. teaches using apertures and spots in an element placed in a light beam to alter the energy distribution. Neither includes or suggests such beam shaping elements in combination with a zoom or spot adjusting mechanism. The device of L'Esperance, Jr., is configured on a rotating disc to allow changing the energy distribution by changing the element size and/or transmittance. The elimination of this bulky configuration is specifically discussed in the instant application as an objective of the invention.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Henry M. Johnson, III whose telephone number is (571) 272-4768. The examiner can normally be reached on Monday through Friday from 6:00 AM to 3:00 PM.
